DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: update the related applications section. The present application cannot be a child case of application 09/815,753 because the application issued 12-17-02, prior to the filing date of the instant application.

Appropriate correction is required.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-30 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-27 of copending Application No. 10/797,699. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications claim golf

Art Unit: 3711

balls comprising a center core and/or an intermediate core layer made from a fully neutralized ionomer, an outer core layer, and a cover. The applications differ by the claimed ranges for the properties of the layers. For example, the present invention claims a center shore C surface hardness of less than 85 while the '699 application claims less than 80. Varying the ranges within a small range does not render a patentable distinction. One of ordinary skill in the art would vary the properties for the desired ball performance.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
